7	R Recommended Package Operational Qualification - Package Vignettes (OQ)	22
8	R Base Package Operational Qualification - Package Tests (OQ)	24
9	R Recommended Package Operational Qualification - Package Tests (OQ)	27
10	Summary of Findings	33

### 1 Introduction

The R software being tested in this report was downloaded from The Comprehensive R Archive Network (CRAN):

```
http://cran.r-project.org/
```

or a CRAN mirror:

```
http://cran.us.r-project.org/mirrors.html
```

if this is a stable release or from:

```
http://R.research.att.com/
```

if a patched release for Apple's OSX operating system.

The R software was installed on this computer in a manner consistent with "The R Installation and Administration Manual" (the Manual) which is available from:

```
http://cran.r-project.org/doc/manuals/R-admin.html
```

The Manual provides recommendations for the post-installation testing of R. The procedures for this testing are described in:

```
http://cran.r-project.org/doc/manuals/R-admin.html#Testing-a-Unix_002dalike-Installation
```

for Unix, Linux and OSX installations and:

```
http://cran.r-project.org/doc/manuals/R-admin.html#Testing-a-Windows-Installation
```

for Windows installations. The results contained within this report are based upon an automated implementation of the procedures described in the Manual.

General guidance for the use of R in regulated clinical trials has been provided by the R Foundation in a document entitled:

R: Regulatory Compliance and Validation Issues
A Guidance Document for the Use of R in Regulated Clinical Trial Environments

which is available from:

```
http://www.r-project.org/doc/R-FDA.pdf
```

The above document describes various characteristics of R, including the Software Development Life Cycle (SDLC) and relevant aspects of 21 CFR Part 11 compliance issues as they may pertain to the use of R for statistical analysis applications for clinical trials.

The output on the following pages of this report describe various technical characteristics of the computer upon which R is running, the R installation, current R session information and is followed by a series of tests for the so-called "Base" and "Recommended" packages which are a part of the official R distribution, as released by the R Foundation.

Installation Qualification (IQ) $\mathbf{2}$ 

The following is the output of R.home(), showing where R was installed on this computer:

```
1 /Library/Frameworks/R.framework/Resources
```

The following is the output of system("R -e 'q()'"), presenting the R welcome banner as displayed from a default R console (terminal) to show the R console correctly running and then exiting:

```
R version 2.15.2 Patched (2013-01-13 r61650) -- "Trick or Treat"

R is free software and comes with ABSOLUTELY NO WARRANTY.

You are welcome to redistribute it under certain conditions.

Type 'license()' or 'licence()' for distribution details.

R is a collaborative project with many contributors.

Type 'contributors()' for more information and

'citation()' on how to cite R or R packages in publications.

Type 'demo()' for some demos, 'help()' for on-line help, or

'help.start()' for an HTML browser interface to help.

Type 'q()' to quit R.

> q()
```

Only "Base" and "Recommended" packages, which are a part of the official R Foundation distribution of R, should be installed while running these tests. A scan of the currently installed packages indicates:

#### Only Base and Recommended packages are currently installed.

The following is the output of installed.packages().

```

    Test suite result: PASS
```

The final line of the above output displays the status of running the above tests. "PASS" indicates a successful running of the tests, a "FAIL" would indicate that an error was detected during the running of the tests.

## 10 Summary of Findings

The following table presents the results of the various tests performed in the prior sections.

The column labeled "System Results" is an indication that the individual test batch file was able to be executed (PASS) or that there may have been a system level failure (FAIL) in the execution of the program.

The column labeled "Test Results" is an indication that the test suites themselves either passed (PASS) or failed (FAIL) and should be consistent with the final line output for each section of tests. As noted previously, there may be some tests where the result of performing a "diff" on two files that were being compared demonstrate a content difference that may or may not be relevant. These differences, if present, may or may not be based upon system settings such as locale. Any such differences displayed in the prior sections should be reviewed in detail to determine their relevance to the Operational Qualification of this R installation.

The result for Installation Qualification is listed in the "Test Results" column only. The result will be PASS if system("R -e 'q()'") ran successfully AND installed.packages() shows that only Base and Recommended Packages are currently installed. If BOTH of the requirements are not met, the result will be FAIL.

Table 10.1: Summary of Test Suite Results

Test Suite	System Results	Test Results
Installation Qualification	NA	PASS
Core Operational Qualification - System Tests	PASS	PASS
Base Package Operational Qualification - Package Examples	PASS	PASS
Base Package Operational Qualification - Package Vignettes	PASS	PASS
Recommended Package Operational Qualification - Package Examples	PASS	PASS
Recommended Package Operational Qualification - Package Vignettes	PASS	PASS
Base Package Operational Qualification - Package Tests	PASS	PASS
Recommended Package Operational Qualification - Package Tests	PASS	PASS
